# DESCRIPTION

PRINTING APPARATUS, CONTROL METHOD THEREFOR,

AND STORAGE MEDIUM

*Cross-Reference To Related Application*  
*This application is a continuation of pct/13p02/108*  
5 TECHNICAL FIELD *filed on Oct. 27, 2005.*

The present invention relates to a printing apparatus which receives image data from an image sensing apparatus such as a digital camera, a memory, or the like and prints the image data on a print  
10 medium, a control method therefor, and a storage medium.

## BACKGROUND ART

In recent years, digital cameras (image sensing  
15 apparatuses) capable of photographing an image by a simple operation and converting the image into digital image data have widely been used. To print an image photographed by this camera and use the print as a photograph, the photographed digital image data is  
20 temporarily input from the digital camera to a PC (computer), and undergoes image processing by the PC. Then, the processed data is output from the PC to a color printer, which prints the data.

To the contrary, there have been developed color  
25 print systems capable of directly transferring digital image data from a digital camera to a color printer and printing the data without the mediacy of any PC, and
